- **Web Server:** Apache | Nginx
- **Working Platform:** LAMP | LEMP | Ubuntu | DigitalOcean | AWS | Docker | Heroku
- **CI/CD:** Jenkins | GitHub Action
- **Payment Gateway:** PayPal, PayU | Paytm Payment Gateway
- **Others:** Firebase Cloud Messaging | Redis | Elasticsearch | Google Maps, S3 | Swagger | PHPUnit | MongoDB | Node.js
- **Third Party API:** Delhivery API | ICIMS ATS API | ADP ATS API | Sovren/Textkernel API
- **Project Management Tools:** JIRA, Zube

RITESH KUMAR

Technical Lead | Senior Software Engineer | Laravel Developer

PROFILE SUMMARY

- Result-oriented professional with **over 15 years** of extensive experience in developing and managing applications specializing in **Core PHP, CodeIgniter and Laravel framework**.
- **Expertise in REST API development**, Back-end programming and database management with a strong command of **MySQL** and related technologies.
- Capabilities in leading and contributing to diverse projects, employing cutting-edge technologies such as **Docker, Elasticsearch, Redis and MangoDB**.
- Applied **SOLID principles, Design Patterns**, and Object-Oriented Programming (**OOP**) to create scalable, maintainable, and efficient solutions.
- With **6+ years of experience as a Team Lead**, effectively managing projects.
- Proficient in **Agile methodologies** and acting as **Scrum Master**.
- Skilled in **Project management, Team Management, Project Coordination, Task Allocation, Client Interaction** and understanding business requirements with a track record of successfully delivering projects on time.
- Capabilities in determining operational feasibility by evaluating analysis, problem definition, requirements, solution development and proposed solutions.

ROLES AND RESPONSIBILITY

- Engaged with clients to comprehend their business needs and requirements effectively.
- Executed code optimization strategies and supervised code deployment on staging servers.
- Managed and executed **Project Management** using Agile Methodology.
- Fostered collaboration and coordination within the team, ensured timely project completion and adherence to deadlines.

WORK EXPERIENCE

Designation: Project Manager

Projects Managed:

Healthcare Jobs Portal

- Developed a specialized Healthcare Job Portal leveraging AWS, Docker, Laravel 9, MySQL, React, AngularJS, REST API, WordPress, Feed, Swagger, Google Maps, Google Tag Manager and Elasticsearch for efficient job posting, searching and application processes.
- Integrated multiple API services including ICIMS ATS, SYMPLR ATS and ADP ATS to streamline job posting and synchronization of job data with Elastic search.
- In the admin panel, an admin can create dedicated partner-specific settings. Additionally, a unique Google Tag Manager is assigned to each partner.
- Implemented features for users to search and apply for jobs seamlessly, with provisions for creating partner-specific job portals and generated feeds for external platforms like Indeed and Zip Recruiter.

Resume Parsing and Title Matching API | Micro Service

- Developed a specialized Micro Service using Laravel 6 and React, accessible only to authorized partners, facilitated resume uploading & parsing using Textkernel API and return data into JSON format.
- Implemented job title matching functionality, allowing users to input raw job titles and retrieve standardized job titles based on predefined patterns from an XLS file.

CORE COMPETENCIES

- Laravel Development
- PHP Development
- CodeIgniter Development
- REST API Development
- Object-Oriented Programming
- SOLID Principles
- Design Patterns
- RDBMS
- CI/CD Implementation
- Scrum Master

SOFT SKILLS

- Adaptability
- Analytical
- Communicator
- Problem-solving
- Leadership

EDUCATION

- Master of Computer Applications
- Bachelor of Computer Applications

PERSONAL DETAILS

- **Languages:** English
- **Address:** Delhi, India

Designation: Senior Technical Lead

Projects Managed:

Online E-Commerce Reselling App

- Developed an Online E-commerce Reseller App using Opencart 3, CodeIgniter 3, and React.js, enabled users and resellers to set profit margins on products and share them with end customers.
- Integrated Delhivery API and Firebase Cloud Messaging for bulk push notifications, automatic product uploads to warehouse, and order processing.

Designation: Technical Lead

Projects Managed:

Online Learning Application

- Developed a web application using Laravel and MySQL, enriched with jQuery, Ajax, and Cron Job functionalities, catered to online learning needs for students.

Online Visa and Tour Package

- Implemented a web application utilizing Laravel and MySQL, designed for the sale of visas and SIM cards from multiple countries, with built-in currency conversion.

Online Education Software

- Developed a web application using AWS, S3, CodeIgniter and MySQL, enhanced with jQuery and Ajax functionalities, tailored for CA Test Exam preparation.

Designation: Senior Full Stack Developer

Projects Managed:

Bulk Email and SMS Marketing

- Developed an application using CorePHP and deployed on AWS, featuring MySQL database and incorporating jQuery and JavaScript for enhanced user experience.
- Users can efficiently manage email campaigns, including template uploading, subscriber list management, and campaign scheduling through the admin panel.

Designation: Senior PHP Developer

Projects Managed:

Old Age Home Listing Website

- Utilized CodeIgniter and MySQL along with Ajax and Cron Job functionalities to develop a property listing website.

Education College Website

- Developed a college website using WordPress, specialized in WordPress theme development for customized design and functionality.

Template Design Send email

- Implemented a property website using CorePHP and MySQL, enriched with JavaScript, Ajax, and Cron Job functionalities for seamless user experience.
- Users have the ability to create or upload templates using a WYSIWYG HTML editor and execute bulk email campaigns via scheduled cron jobs.

Designation: PHP Developer

Projects Managed:

Service Management Software

- Created an iPad Safari-compatible CorePHP application that utilized a MySQL database, along with HTML5, jQuery, Ajax, and Cron Job functionalities.
- Integrated Google Map for location tracking, enabled technicians to receive service requests, navigate to destinations, and generate invoices, while allowing super admins to manage vendors and technicians diligently.
